

Data quality tool decision criteria

Data Coverage & Connectivity

- Supported data Sources (SAP/ Non SAP/Kafka Topics without the need to flatten the topics before checks)
- Cloud / on-premise
- Data.World data Catalog compatibility

Data Quality Capabilities

- Rule management
 - Predefined rules and custom rules possible
 - Business-friendly rule creation (no/low code)
 - Checks for more than one table possible
 - Rule versioning & life cycle management
 - Threshold management
- Profiling and discovery
 - Automated data profiling
 - Rule mining
- Deduplication
 - Fuzzy matching
- Reference data
 - Address/Postal validation
- AI capabilities for intelligent profiling, automated rule generation, metadata description generation, and end-to-end data quality automation.

Reporting & Monitoring

- Dashboards
 - Data Quality scorecards (KPI, Historical trends, drill down analysis)
 - KPIs by domain, system, Owner...
 - Export and integration (Power BI, Sap analytics cloud)
 - Alerting & notifications

Performance and Reliability

- Processing speed
- Error handling & logins
- Scalability (large data volumes)
- SLA support
- Audit trail

Cost & Licensing

- Licensing model (per user, per data volume, per rule or system...)
- ROI measurement support
- Time of implementation

Data quality tool decision criteria

Usability & User experience

- User Interface
- Role based access (Data Steward, Data Owner,...)
- Workflow and collaboration
 - Issue management
 - Data Quality remediations workflows
 - Notifications and alerts

Technical requirements:

- Cloud solution
- Data encryption (in rest, in transit)
- Advanced job scheduling
- Interface between data.world and dqm solution possible
